Lab2: EEG classification

Lab Objective:

In this lab, you will need to implement simple EEG classification models which are **EEGNet**, **DeepConvNet** [1] with **BCI competition dataset**. Additionally, you need to try different kinds of activation function including ReLU, Leaky ReLU, ELU.

Important Date:

- 1. Experiment Report Submission Deadline: 4/11 (Thu) 12:00
- 2. Demo date: 4/11 (Thu)

Turn in:

- 1. Experiment Report (.pdf)
- 2. Source code

Notice: zip all files in one file and name it like 「DLP_LAB2_your studentID_name.zip」, ex: 「DLP_LAB2_0656608_莊祐銓.zip」

Requirements:

- 1. Implement the **EEGNet**, **DeepConvNet** with three kinds of activation function including **ReLU**, **Leaky ReLU**, **ELU**
- 2. In the experiment results, you have to show the highest accuracy (not loss) of two architectures with three kinds of activation functions.
- 3. To visualize the accuracy trend, you need to plot each epoch accuracy (not loss) during training phase and testing phase.

Dataset:

BCI Competition III - IIIb

Cued motor imagery with online feedback (non-stationary classifier) with 2 classes (left hand, right hand) from 3 subjects

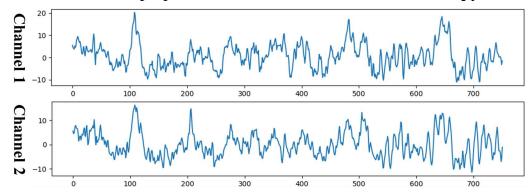

[2 classes, 2 bipolar EEG channels]

Reference: http://www.bbci.de/competition/iii/desc IIIb.pdf

Implementation Details:

• Prepare Data

The training data and testing data have been preprocessed and named [S4b_train.npz, X11b_train.npz] and [S4b_test.npz, X11b_test.npz] respectively. Please download the preprocessed data and put it in the same folder. To read the preprocessed data, refer to the "dataloader.py".

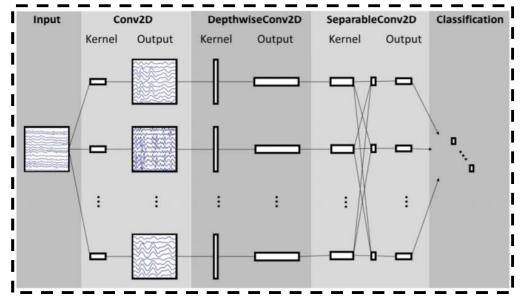

• Model Architecture

You need to implement simple EEG classification models which are EEGNet and DeepConvNet.

EEGNet:

Overall visualization of the EEGNet architecture

Reference: Depthwise Separable Convolution

https://towardsdatascience.com/a-basic-introduction-to-separable-convolutions-b99ec3102728

EEGNet implementation details:

```
EEGNet(
   (firstconv): Sequential(
        (0): Conv2d(1, 16, kernel_size=(1, 51), stride=(1, 1), padding=(0, 25), bias=False)
        (1): BatchNorm2d(16, eps=le-05, momentum=0.1, affine=True, track_running_stats=True)
   )
   (depthwiseConv): Sequential(
        (0): Conv2d(16, 32, kernel_size=(2, 1), stride=(1, 1), groups=16, bias=False)
        (1): BatchNorm2d(32, eps=le-05, momentum=0.1, affine=True, track_running_stats=True)
        (2): ELU(alpha=1.0)
        (3): AvgPool2d(kernel_size=(1, 4), stride=(1, 4), padding=0)
        (4): Dropout(p=0.25)
   )
   (separableConv): Sequential(
        (0): Conv2d(32, 32, kernel_size=(1, 15), stride=(1, 1), padding=(0, 7), bias=False)
        (1): BatchNorm2d(32, eps=le-05, momentum=0.1, affine=True, track_running_stats=True)
        (2): ELU(alpha=1.0)
        (3): AvgPool2d(kernel_size=(1, 8), stride=(1, 8), padding=0)
        (4): Dropout(p=0.25)
   )
   (classify): Sequential(
        (0): Linear(in_features=736, out_features=2, bias=True)
   )
}
```

DeepConvNet:

You need to implement the DeepConvNet architecture by using the following table, where C = 2, T = 750 and N = 2. The <u>max norm</u> term is ignorable.

| Layer | # filters | size | # params | Activation | Options |
|---|-----------|-----------|---------------------|------------|--------------------------------------|
| Input | | (C, T) | | | |
| Reshape | | (1, C, T) | | | |
| Conv2D | 25 | (1, 5) | 150 | Linear | mode = valid, max norm = 2 |
| Conv2D | 25 | (C, 1) | 25 * 25 * C + 25 | Linear | $\bmod e = valid, \max norm = 2$ |
| $\frac{\text{BatchNorm}}{\text{BatchNorm}}$ | | | 2 * 25 | | epsilon = 1e-05, $momentum = 0$. |
| Activation | | | | ELU | |
| MaxPool2D | | (1, 2) | | | |
| Dropout | | | | | p = 0.5 |
| Conv2D | 50 | (1, 5) | 25 * 50 * C + 50 | Linear | mode = valid, max norm = 2 |
| BatchNorm | | | 2 * 50 | | epsilon = 1e-05, $momentum = 0$. |
| Activation | | | | ELU | |
| MaxPool2D | | (1, 2) | | | |
| Dropout | | | | | p = 0.5 |
| Conv2D | 100 | (1, 5) | 50 * 100 * C + 100 | Linear | mode = valid, max norm = 2 |
| BatchNorm | | | 2 * 100 | | epsilon = $1e-05$, momentum = 0 . |
| Activation | | | | ELU | |
| MaxPool2D | | (1, 2) | | | |
| Dropout | | | | | p = 0.5 |
| Conv2D | 200 | (1, 5) | 100 * 200 * C + 200 | Linear | mode = valid, max norm = 2 |
| BatchNorm | | | 2 * 200 | | epsilon = 1e-05, $momentum = 0$. |
| Activation | | | | ELU | |
| MaxPool2D | | (1, 2) | | | |
| Dropout | | | | | p = 0.5 |
| Flatten | | | | | |
| Dense | N | | | softmax | $\max \text{ norm} = 0.5$ |

Activation Functions

$$ReLU(x) = max(0, x)$$

$$\text{LeakyRELU}(x) = \begin{cases} x, & \text{if } x \geq 0 \\ \text{negative_slope} \times x, & \text{otherwise} \end{cases}$$

By default, the negative slope = 0.01

$$ELU(x) = \max(0, x) + \min(0, \alpha * (\exp(x) - 1))$$

The α value for the ELU formulation. Default: 1.0

Reference:

https://medium.com/tinymind/a-practical-guide-to-relu-b83ca804f1f7 https://pytorch.org/docs/stable/nn.html

In the PyTorch framework, it is easy to implement the activation function. Just typing the following code!

```
nn.LeakyReLU(),
nn.ReLU(),
nn.ELU(),
```

Hyper Parameters

Batch size= 64 Learning rate = 1e-2 Epochs = 300
Optimizer: Adam Loss function: torch.nn.CrossEntropyLoss()

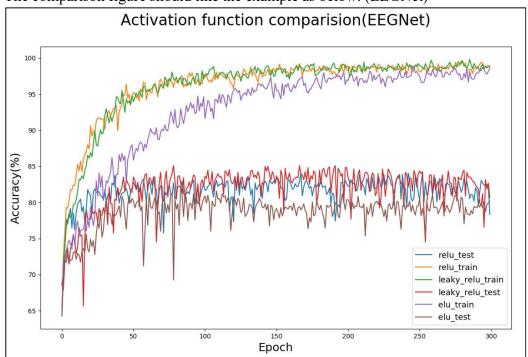

You can adjust the hyper-parameters according to your own ideas.

• Result comparison

In this part, you can use the matplotlib library to draw the graph.

Reference: https://matplotlib.org/

The comparison figure should like the example as below. (EEGNet)

Report Spec (60%)

- 1. Introduction (20%)
- 2. Experiment set up (30%)
 - A. The detail of your model
 - EEGNet
 - DeepConvNet
 - B. Explain the activation function (ReLU, Leaky ReLU, ELU)
- 3. Experimental results (30%)
 - A. The highest testing accuracy
 - Screenshot with two models
 - anything you want to present
 - B. Comparison figures
 - EEGNet
 - DeepConvNet
- 4. Discussion (20%)
 - A. Anything you want to share

---- Criterion of result (40%) ----

Accuracy > = 87% = 100 pts

Accuracy $85 \sim 87\% = 90$ pts

Accuracy $80 \sim 85\% = 80$ pts

Accuracy $75 \sim 80\% = 70$ pts

Accuracy < 75% = 60 pts

Score: 40% experimental results + 60% (report+ demo score) P.S If the zip file name or the report spec have format error, it will be penalty (-5).

In the demo phase, you only need to show the highest testing accuracy of the model.
